SECURITY RISK ASSESSMENT

We can provide an assessment on your network security by running application visibility and risk analysis on your network for two weeks. At the end of the two weeks, we can provide you with insights on your network security. You can find out which applications and threats are on your network some of which might not be detected using traditional firewalls.

SEE WHAT YOU'VE BEEN MISSING

In the past, it was easy for firewalls to control applications because traffic could easily be classified based on ports and protocols using stateful inspection technology. But today's modern Internet applications are no longer tied to specific ports or protocols, and often use encrypted SSL tunnels or other tactics to avoid detection. These applications bypass traditional firewalls with ease, resulting in increased business risks.

THE APPLICATION VISIBILITY AND RISK (AVR) REPORT

We propose to show exactly what your current firewall has been missing with the AVR Report. The AVR Report provides a business risk assessment based on the analysis of the application traffic traversing the network, taking into account the different types of applications, how they are being used and the relative security risk. By looking at the associated risks, along with how the applications are being used, administrators can make more informed decisions on how to treat the applications via a security policy.

HOW THE AVR REPORT IS GENERATED

Generating an Application Visibility and Risk Report involves deploying a Palo Alto Networks next-generation firewall within the network where it monitors the application traffic traversing the Internet gateway. At the end of the data collection period, an AVR Report is generated that provides an analysis of the application traffic, the overall security risk rating, and the related business risk. The report closes with a detailed look at how effective the existing technologies are at supporting and enforcing the customer application usage control policies.

ABOUT US

We are an Australian licensed telecommunications carrier specialising in the design, build and operation of next generation critical communications network infrastructure and associated services. We have over 40 years' of experience delivering critical network services to Government, Enterprise and Service Provider organisations. We specialise in delivering carrier grade and alternate telecommunications infrastructure in non-metro, regional and remote Australia.

We have offices across the country with a national network operations centre (NOC) in NSW that proactively monitors our networks 24/7/365.

Contact us on 1300 837 835 (1800 VERTEL) or info@vertel.com.au. Visit us at www.vertel.com.au.
